CAREER OBJECTIVE

B.Tech Computer Science & Engineering undergraduate at IMSEC-AKTU with a strong foundation in data structures, algorithms, object-oriented programming, and backend development. Experienced in designing modular REST APIs, containerized services, and end-to-end software pipelines. Seeking a Software Developer Internship at Josh to contribute to scalable, well-engineered software and grow as a backend-focused developer.

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL

Core CS Concepts: Data Structures & Algorithms, Object-Oriented Programming, DBMS

Backend Development: FastAPI, REST API Design, Modular System Architecture

DevOps & Tools: Docker, Docker Compose, Git, GitHub

Databases: MySQL, SQL

Software Practices: Version Control, Code Review, Cross-Validation & Testing, Agile Collaboration

Additional Exposure: PyTorch, Scikit-learn, Pandas, NumPy, LLM Integration (Ollama / LLaMA 3)

PROJECTS

AI Code Review & Optimization Engine

github.com/vishishodia/code-review-ai

Technologies: Python, FastAPI, Docker, Docker Compose, REST API, LLaMA 3 (Ollama)

- Designed and built a modular FastAPI backend with clean separation between static analysis, complexity estimation, and suggestion-generation layers, following sound software architecture principles.
- Implemented a rule-based static analysis engine to detect inefficient code patterns (nested loops, unbounded recursion) and estimate time complexity from $O(1)$ to $O(n^3)$.
- Containerized the full application with Docker and Docker Compose for consistent local development, testing, and deployment workflows.

Urban Air Quality Analysis & Prediction System

github.com/vishishodia/AirQualityProject

Technologies: Python, Scikit-learn, Pandas, Matplotlib, Seaborn

- Built a structured, modular data pipeline to ingest, clean, and process large-scale PM2.5 and NO₂ datasets, applying reusable software design patterns.
- Developed and evaluated supervised ML models to forecast Air Quality Index levels, validating results with cross-validation and standard performance metrics.

AI Resume Screening System

Technologies: Python, NLP, Sentence Transformers, Cosine Similarity, Scikit-learn, Pandas

- Built an end-to-end NLP pipeline that parses resumes (PDF/TXT), extracts skills and key entities, and ranks candidates against a job description using semantic similarity.
- Generated dense embeddings for resumes and job descriptions with Sentence Transformers and applied cosine similarity scoring to produce a ranked candidate shortlist.
- Designed a modular pipeline (parsing → extraction → embedding → ranking → dashboard) and presented results through an interactive dashboard for quick HR-style review.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science & Engineering (AI & ML)

2023 – 2027

IMS Engineering College (IMSEC), Affiliated to AKTU | CGPA: 7.0

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Software Engineering, Probability & Statistics, Machine Learning

CERTIFICATIONS & ACHIEVEMENTS

- Google for Developers & EduSkills (AICTE Initiative) — AI-ML Virtual Internship
- Anthropic — Claude-101 Certification
- AI Fluency: Framework and Foundations — core AI/ML concepts and applications
- Consistent daily problem-solving streak — GeeksforGeeks 160-Day Coding Challenge
